

# Vision Release DLM 670

## Summary of Changes

May 2019

### Vision Front Screen

-  The Vision front screen has been updated with our new rebranded **News from The Hive** and **News from the blog** feeds:

The screenshot shows the Vision Live System interface. At the top, there are navigation tabs: Home, Reporting, Messaging, Utilities, and Management Tools. Below these are several icons for different modules: Consultation Manager, Apps Controller, Appointments, Registration, Daybook, Mail Manager, and a Close All button. The main content area is divided into three columns. The left column is titled 'SYS' and contains 'My Daybook Tasks' with a list of tasks including 'Review clinical document' and 'Send Yellow Card'. The middle column is titled 'News from The Hive' and contains several news items, including 'Issues with loading EMIS patients for Federations' and 'Immunisation Uptake Report Update - March 2019'. The right column is titled 'News from the blog' and contains several blog posts, including 'Preparing for the reclassification of Pregabalin and Gabapentin' and 'GP Systems Go Live with EPS for Controlled Drugs (CDs)'. Annotations with arrows point to the 'News from The Hive' and 'News from the blog' sections, stating: 'Displays items from the Hive News feed', 'Select your country to filter', and 'Displays items from the Vision News feed'.

### Consultation Manager

-  **Yellow Card** - The occasional issue of missing drug names and medical history has been addressed.
