Vision Release DLM 690

Summary of Changes

August 2019

The following changes are included in the DLM 690 Vision release:

- **SNOMED CT** - The issue with long SNOMED CT values has been addressed. The full value now displays in the Audit Trail within Consultation Manager.

- **The Health Improvement Network (THIN)** – The THIN data collection service has been updated to consolidate patient data from different sources whilst maintaining the patient's anonymity.

Vision Release DLM 690 does not contain any other customer facing updates, but instead focuses on the infrastructure behind the scenes in order to improve existing functionality and provide a solid platform for all the exciting content currently being developed.
