

Vision 3 Release DLM 790

Summary of Changes

Vision 3 release **DLM 790** contains the following new features and improvements:

England and Wales only

GP2GP Large Messaging – DLM 790 delivers **GP2GP** large messaging. This enables you to send and receive electronic patient records over 5mb and those containing over 100 attachments of any file extension. The way you process **GP2GP** messages does not change with the enabling of large messaging, the only visible change is the removal of the **Journal** tab in **Mail Manager** as it is no longer required. **This functionality is currently switched off pending assurance and we will inform you when GP2GP large messaging is ready to be automatically switched on.**

 See [GP2GP in England](#) and [GP2GP in Wales](#) in the **Consultation Manager** Help Centre for details.

Wales only

- **2DRX** - The issue with 2DRX barcodes not accounting for British Summertime (BST) and Greenwich Mean Time (GMT) has been addressed.
- **WCCG** – **Vision 3** now receives and files **WCCG Advice Request** messages via **Mail Manager**.
