

# Pharmacy Manager Release 16.2

Pharmacy Manager release **16.2** introduces the following new features and improvements:

## All Countries

- **Dose Codes** - You can now use dose codes when updating the directions in the Clinical Check module.

---

➔ See [Clinical Check \(England\)](#) in the **Pharmacy Manager Help Centre** for details.

---

- **Fast Labelling** - User entered products are no longer suggested for fast labelling while dispensing. This ensures that the dm+d code is correct.

## England Only

- **Available Reports** - As reports **EPS R2 Claims Total (FP34c)** and **NHS Totals (FP34)** were replaced by the **Reimbursement** functionality in release **14.8**, they are now no longer available from the reports list.

---

➔ To view your **Daily Claim Totals** and **FP34 Report**, see [Reimbursements](#) in the **Pharmacy Manager Help Centre** for details.

---
