

# Vision Anywhere V4.4 for iOS Release Guide

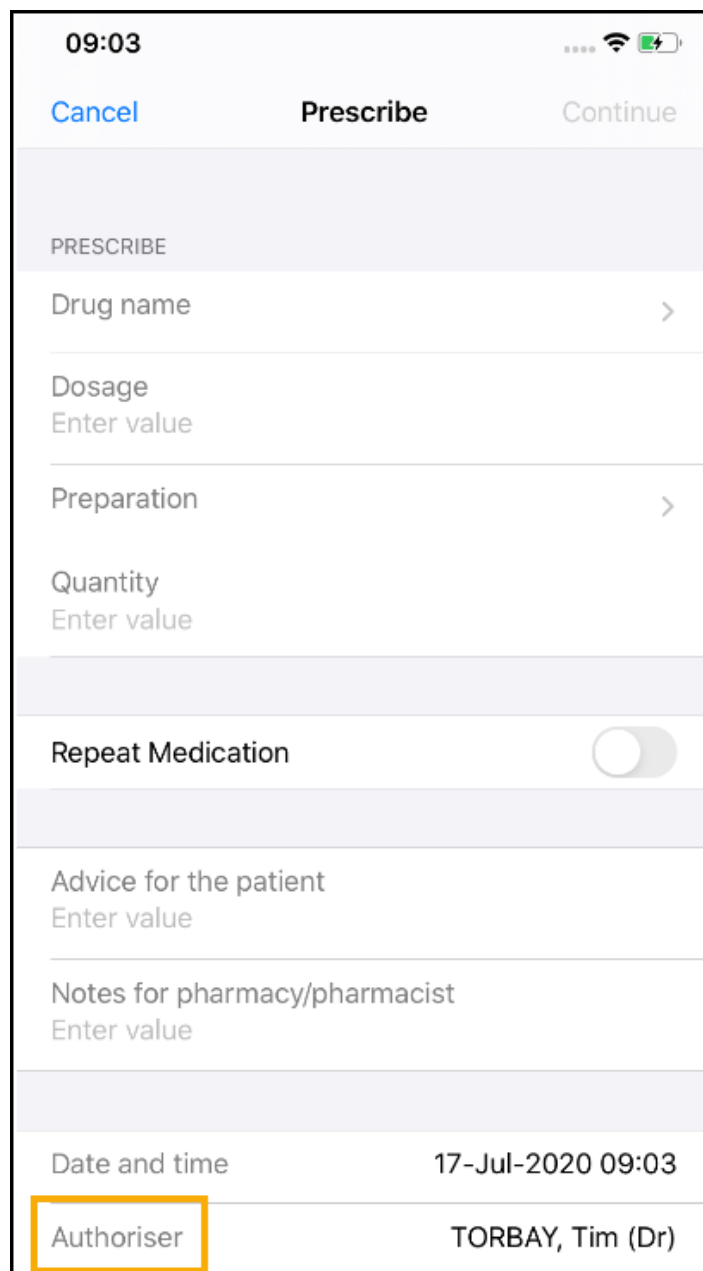

## Summary of Changes

July 2021

**Vision Anywhere** release **4.4** for **iOS** contains the following new features and improvements:

 **Note** – This is the first release since **Vision Anywhere 3.9**.

- **Medication** - When recording a medication, the term **Authoriser** replaces **Clinician**:

09:03		...	Wi-Fi	Battery
Cancel	Prescribe	Continue		
PRESCRIBE				
Drug name	>			
Dosage	Enter value			
Preparation	>			
Quantity	Enter value			
Repeat Medication	<input type="checkbox"/>			
Advice for the patient	Enter value			
Notes for pharmacy/pharmacist	Enter value			
Date and time	17-Jul-2020 09:03			
Authoriser	TORBAY, Tim (Dr)			

- **Independent and Supplementary Nurse Prescribers** - When recording medication prescribed, your nurse prescribers, both **Independent** and **Supplementary** are now available to select from **Authoriser**. As with all clinicians, if the nurse prescribers are logged in, **Authoriser** defaults to their name, if a non-clinician is logged in, the **Usual GP** is the default, but **Independent** and **Supplementary** nurse prescribers are now available to select.

**Note** - This functionality is not currently available in a Shared Care Setting.

---

- **Downloaded Patient Records** - Downloaded patient records, that have not been updated, are now stored on your device for 7 days and then deleted.
- **Repeat Synchronisation** - The issue with the intermittent creation of a duplicated Repeat Master has been addressed.
- **iOS Version** - The minimum version of **iOS** for **Vision Anywhere** release **4.4** is **iOS 14**.
