Vision Anywhere Release v3.4

Summary of Changes

April 2020

Vision Anywhere release v3.4 contains the following:

Upgrading to a new version of Vision Anywhere

When you receive updates to Vision Anywhere, the system now retains:

- Incomplete (open) encounters remain for 90 days
- Any encounters that have failed to synchronise always remain
- Any encounters that are in error, remain
- Downloaded patient records
- Manually downloaded patient records
- Any prescribing and encounter preferences you have updated

Therapy

- **Black triangle indication** - Black triangle products are those being intensively monitored by the MHRA. When searching for a drug these items are now flagged to remind you to report any suspected reactions via the yellow card system. Where

    medication has a Black Triangle designation, a **Black Triangle** displays after the medication name.
- **ACBS indication** – Foodstuff or medicinal toiletry items are flagged by the Advisory Committee on Borderline Substances (ACBS). When searching for an

    item, where an item is designated ACBS, **ACBS** displays after the item name.
- **Controlled Drugs** - When adding a new prescription for a controlled drug item, a new warning displays in orange if you enter more than 30 days supply in the **Quantity**. This is triggered using the calculated daily dose.

    This is a warning only, you can continue and prescribe the amount entered if required.

- **Repeat Reorder form** – The repeat reorder form no longer prints on the right hand side of an acute prescription.
