

Vision Anywhere for Windows Desktop Release 4.8

Summary of Changes

Vision Anywhere release **4.8** contains the following new features and improvements:

Note - For full **Vision Anywhere** release **4.8** functionality you must have **Vision 3** release **DLM 890**.

All Countries

- **Enhanced Write Back** (for **Vision 3** practices only) - The first phase of the planned write back improvement is delivered as part of this release. This introduces:
 - **Editing the Last Encounter** - **Vision 3** practices now have the ability to re-open and update the data recorded in the **Last Encounter** providing you are online and using the same device.

See **Editing an Encounter** on page **3** for details.

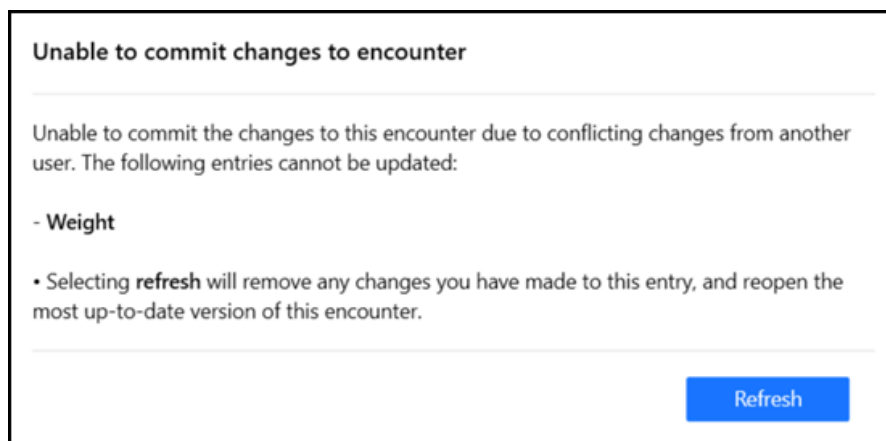

- **'Record out of Date Banner'** - If there is an issue with retrieving data from **Vision 3**, the '*Your view of this record is out of date, some items may not be visible*' banner displays:

 Your view of this record is out of date, some items may not be visible [REFRESH](#)

Select **Refresh** to update the record you are viewing. If the refresh:

- **Is successful** - The '*Successfully updated this patient's records*' message displays, or
- **Fails** - The '*Failed to refresh this patient's records*' message displays.

- **Unable to update encounter entries** - If you try to update an entry at the same time as someone in **Vision 3** updates the same entry, the **Unable to commit changes to encounter** screen displays with the details of what you are trying to update. Select **Refresh**, to cancel your update and reopen the latest version of the entry:

Unable to commit changes to encounter

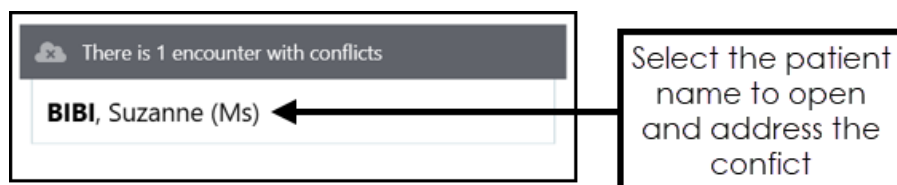

Unable to commit the changes to this encounter due to conflicting changes from another user. The following entries cannot be updated:

- Weight

• Selecting **refresh** will remove any changes you have made to this entry, and reopen the most up-to-date version of this encounter.

Refresh

- **Conflicted encounters not uploaded** - If there are **Encounters** that do not upload due to conflicting issues, for example, trying to edit the same data entry as a member of staff in **Vision 3** and exiting without selecting **Refresh** on the **Unable to commit changes to encounter** screen, the 'There is n encounter with conflicts' message displays:

There is 1 encounter with conflicts

BIBI, Suzanne (Ms)

Select the patient name to open and address the conflict

- **Time** - The time of an entry no longer displays alongside the date on any screen except the **Blood Pressure** screen. The **Blood Pressure** screen completes with the time from the device you are using, update as required, or tick **Unknown** to record the time of the reading is not known.
- **Reprinting Prescriptions** - The issue with reprinting a prescription within the Encounter it was created in, has been addressed.
- **Scoring Test Results - Test Qualifiers** are no longer available for scoring test results.

Editing an Encounter

An open **Encounter** can be updated within **Vision Anywhere**, however once an **Encounter** is closed, only the last **Encounter** of a **Vision 3** registered patient can be re-opened and updated.

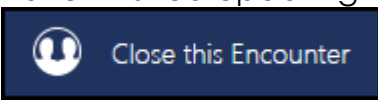

Updating an Open Encounter

To edit an open **Encounter**:

1. From **Vision Anywhere**, select the patient required.
2. From the **Patient Summary** screen, select the open **Encounter**:

3. You can now add to or edit the **Encounter** as required.
4. Once you have finished updating the **Encounter**, select **Close this**

Encounter .

The button is dark blue with a white person icon and the text 'Close this Encounter'.

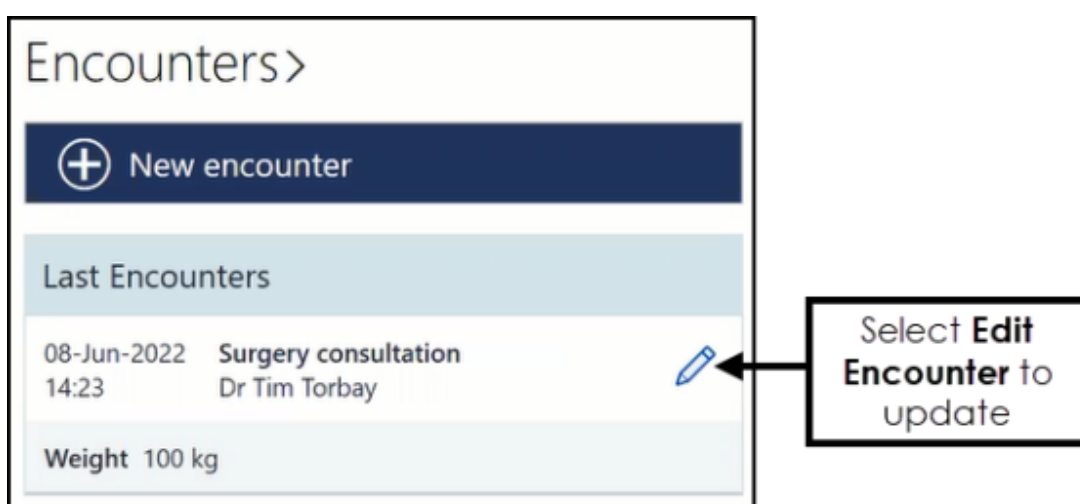

Updating a Closed Encounter

To be able to update the last closed **Encounter** you must be:

- A **Vision 3** practice user.
- Logged on as the originator of the entry and have editing rights.
- Online with the same device as the original entry was made with.

To update the last closed **Encounter**:

1. From the selected patient's **Patient Summary** screen, the last **Encounter** displays under the **Encounters - Last Encounters** header. If you have met the above criteria, **Edit Encounter**  displays, select to start updating:

2. Update the details as required.

3. Select **Save** .

Training Tip - You can print or reprint a prescription from a closed **Encounter** providing the updating criteria mentioned above are met.

Please be aware, a number of data types cannot currently be updated once an **Encounter** is closed, this includes:

- MED3s
- Immunisations
- Referrals
- Test Requests
- Medications
- Entry types added from the WCCG and WGPP applications - Wales only:
 - Supplementary message
 - Discharge message
 - Advice request
 - Advice response
 - Referral update
 - Clinical letter
 - Clinical dialog
 - Back to referrer

Note - Templates and Calculators are made up of various data types, therefore the above restrictions apply to them, for example, you can update the **Blood Pressure** on a **Template**, but not an **Immunisation**.

Remember - Entries entered in **Vision 3** do not meet the editing criteria so cannot be updated in **Vision Anywhere**.
