

SIS 10550 Vision Release

Summary of Changes

October 2020

Vision+ SNOMED CT

• The latest SNOMED CT 30.0 dictionary is implemented in SIS 10550.

Vision+ Practice Reports - England Only

- Influenza QOF Lists England New Influenza category for England only that groups all influenza indicators into one list. Previously practices would invite patients for a flu vaccination using the influenza indicator within each category. With the new influenza category practices can view and invite all qualifying patients under one category. See Practice Reports.
- Vision+ Practice Reports updated in line with QOF45 Business Rules.
- **COPD** New indicator for COPD (COPD009MI1) counts the number of patients with a clinical diagnosis of COPD before 1st April 2020. This is for management purposes only.

Calculators

• Updated licence for continual use of QRISK2 CVD Risk Calculator.

INR Results / Warfarin Dosing Calculations

 Due to a SNOMED code mapping issue in Vision 3, previous INR results were not previously stored correctly and therefore may have been lost, causing an incorrect Warfarin dosing calculation in Vision+. This has now been fixed in SIS 10550 and Vision+ will pick up all historical INR results correctly.

SMS Recalls

• Previously when an SMS message is sent to a patient the **Read** term **9N3G. SMS Text Message Sent to Patient** was added to the patient notes however the mail merge screen did not to state that an SMS had been sent. SIS 10550 fixes this issue.

Outcomes Manager

• **Rule Designer** - Rule Designer within Outcomes Manager (the tool used by Vision authors to create templates), now allows alternative views for Historical Data, Codeset Descriptions, Side Effects and Repeat Usage Control.

Vision+ Practice Reports

The following **Practice Reports** changes are introduced in SIS 10550:

Influenza QOF Lists England - New Influenza category for England only that groups all influenza indicators into one list. Previously practices would invite patients for a flu vaccination using the influenza indicator within each category. With the new influenza category practices can view and invite all qualifying patients under one category.

Category	Indicator					
Chronic Heart Disease	CHD007: Influenza immunisation required					
Chronic Obstructive Pulmonary Disease	COPD007: Influenza immunisation required					
Diabetes Mellitus	DM018: Influenza immunisation required					
Stroke and Transient Ischaemic Attacks	STIA009: Influenza vaccination required					

To send influenza invites to patients who are in the above four categories:

- 1. Log in to Vision 3.
- 2. From the Windows Notification Area, right click Vision+ 🖸 and select Practice Reports.
- 3. Select QOF All.
