

# Vision 3 Release SIS 10650

## Summary of Changes

April 2023

The following changes are included in the **Vision 3 SIS 10650** release:

---

 **Note** - **SIS 10650** is installed regardless of your current SIS version to bring all our customers onto the same version.

---

### Northern Ireland Only

- **Vision+ Templates and Data Entry - QOF 39 Indicator DM006** is updated to include Proteinuria and Microalbuminuria clinical codes and medication.

### Vision+ Pathways

- We have improved the loading time of **Vision+**, this is useful for users with multiple pathways downloaded.

### Vision+ SNOMED CT

- **SIS 10650** includes the latest **v35.2 SNOMED CT** dictionary release.

---

 **Note** - All countries have access to the latest terms using **Vision local codes** which map to **SNOMED CT** terms in the background, see [Vision Local Codes](#) for details.

---

This release also addresses the following issues:

- Template header and footer images are no longer disabled.
- The intermittent "*Invalid variant type*" error no longer occurs.
- The blank Structured Data Area (SDA) form when prescribing a read coded drug no longer displays.
- You can now open a **Patient Group** from **Practice Reports**.
- If you are on **SIS 10640** or **SIS 10645** and have experienced an issue with data extracted into **Outcomes Manager** being incorrect or incomplete, this release addresses the issue.
